

PICO506 – ST-506 / MFM / RLL HARD DRIVE EMULATOR

Firmware: github/kuba2k2 pico506 (RP2040). Bus signals are active-low 5V TTL; Pico-side signals are active-high 3V3 behind 74LS05 open-collector inverters. Outputs are 74LS38 open-collector NAND gated by SELECTED, so a deselected drive releases the daisy-chained control bus, as ST-506 requires.
