

PIC0506 – ST-506 / MFM / RLL HARD DRIVE EMULATOR

Firmware: github.com/kuba2k2/pico506 (RP2040). Bus signals are active-low 5V TTL; Pico-side signals are active-high 3V3 behind 74LS05 open-collector inverters. Outputs are 74LS38 open-collector NAND gated by SELECTED, so a deselected drive releases the daisy-chained control bus, as ST-506 requires.

Bus termination – 220/330 split per ST-506 spec; SIPs socketed, remove on all but the last drive

License: GPL-3.0 or later. Design files on pcbnew board above.
Firmware: github.com/kuba2k2/pico506 (c) 2025 Kuba Szczodrzyński
Board: github.com/hmerrett/pico506-pcb
Drop-in replacement PCB for classic 5.25-inch MFM drives
